TruNatomy™

True, Natural, Anatomy

A solution that adapts to you, leveraging your expertise.

dentsplysirona.com/trunatomy

 **Dentsply
Sirona**

Introducing **TruNatomy™**, the latest creation from **Dentsply Sirona** that is part of a long tradition of successful endodontic treatment solution. This tradition includes recognized brands such as **ProTaper** and **WaveOne**, both known and trusted around the world for their reliability and performance.

Dr. George Bruder (DMD)

Dr. Ove Peters (DMD, MS, PhD)

TruNatomy™'s unique combination of features was developed in partnership with skilled practitioners, **Dr. George Bruder** and **Dr. Ove Peters**, leaders in the field of endodontics, with the **Dentsply Sirona's** Maillefer Research and Development Engineering teams. **TruNatomy™** combines Swiss precision with advanced engineering to offer the benefits of improved performance with increased respect of the tooth anatomy.¹

¹ Compared to ProTaper Next*

The new **TruNatomy™** solution offers:

- Smooth feeling during preparation
- Improved performance and efficacy¹
- More space for debridement and debris removal¹
- Respect of the natural tooth anatomy
- Preserve tooth structure

TruNatomy™ features products for each step of the root canal treatment that work together smoothly:

- **Glide Path** and **Shaping Files**
- Dedicated **Absorbent points**
- Dedicated **Conform Fit™ Gutta-Percha Obturation Points**
- Dedicated **Irrigation Needle**²

¹ Compared to ProTaper Next*

² Tested only on curved canals with a length below 12mm.

ENDODONTIC ACCESS

Successful root canal treatment starts with adequate access to the pulp chamber. The ideal procedure provides access to root canal orifices with minimal loss of dentin.

Retaining dentin serves as the critical base for a quality restoration following root canal treatment. The more dentin preserved during an endodontic treatment, the more options there will be to perform a successful, durable restoration.

Thus, a Conservative Endodontic Cavity (CEC) is the recommended with the **TruNatomy™** system.

A

TRADITIONAL
ENDODONTIC CAVITY

B

CONSERVATIVE
ENDODONTIC CAVITY

How small should the access cavity be?

Our recommendation is for the orifice to be "as small as practical" given the clinical case. Therefore, Conservative Endodontic Cavity (CEC) is recommended above other options.

INSTRUMENTATION

PREPARING THE CANAL

The **TruNatomy™ Orifice Modifier** adapts the shape of the orifice to create the ideal entry point for the **TruNatomy™ Glider** and **TruNatomy™ Shaping Files**. This file contributes to preserve the coronal anatomy due to its flexibility, diameter and heat-treated NiTi alloy. It is also ideal for cases in which the canal is not vertically oriented as it can enter the tooth from different angles. The **TruNatomy™ Orifice Modifier** is recommended in the basic **TruNatomy™** sequence.

GLIDE PATH

The efficacy of root canal preparation is significantly enhanced when an effective, reproducible glide path is created.¹ For that, the **TruNatomy™** system features a dedicated glide path instrument.

- Operates at a higher speed with less torque²
- With just 2 cutting edges,³ it encounters less resistance and thus requires less applied pressure, ensuring precision with increased ease of use
- Thermal treatment provides greater flexibility with improved fatigue resistance⁴

TruNatomy™ Orifice Modifier

TruNatomy™ Glider

TruNatomy™ Small Shaping File

TruNatomy™ Prime Shaping File

TruNatomy™ Medium Shaping File

SHAPING

TruNatomy™ Shaping Files are available in three different sizes and lengths to treat a wide range of cases. While the **TruNatomy™ Prime** shaping file is appropriate for most cases, two additional shaping files, the **TruNatomy™ Small** and the **TruNatomy™ Medium**, are available to address both smaller and larger canals. The clinician will experience a fluid transition between the TruNatomy™ Shaping Files.

TRUNATOMY™ OFFERS SUPERIOR EFFICIENCY

All three shaping files offer a slim shape combined with a unique cross-section for better performance while providing more space for superior debris debridement.

- Slim NiTi wire design: **0.8mm maximum flute diameter (MFD)** instead of up to 1.2mm for most generic variable tapered files
- Off-centered cross-section
- Operates at a higher speed with less torque²

Up to **3** times more flexible than ProTaper Next*

TRUNATOMY™ ENSURES BETTER RESPECT OF THE NATURAL TOOTH ANATOMY

The instrument is made of special NiTi heat-treated wire that provides higher flexibility, allowing the file to be **pre-curved** when needed. Thanks to its superior canal-centering ability⁴, the instrument is designed to adapt to the canal, not the other way around.

I thought endo was all about removing bacteria.

Yes, that is a very important goal but the overarching goal is to aid in the retention of a functional dentition.

¹Elnaghy & Elsaka. J Endod. 2014 Dec;40(12):2053-6.
³Compared to 4 for ProTaper Gold.

²500 rpm vs traditional file speed like ProGlider and ProTaper Next* (300 rpm).
⁴Compared to ProTaper Next*.

TRUNATOMY™ PRESERVES STRUCTURAL DENTIN

The union of the file geometry, regressive tapers and the slim, highly-flexible wire enables efficient root canal treatment while removing only dentin where clinically needed.

● TruNatomy™ Prime ● Generic progressive tapered file

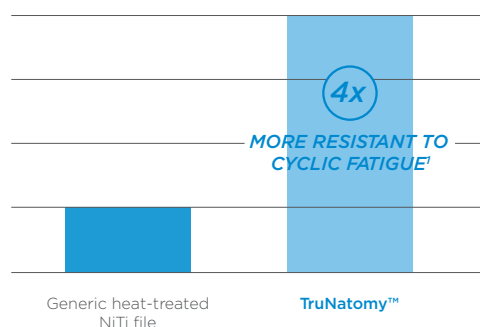

A UNIQUE COMBINATION OF FEATURES

- **9.5mm shaft** corresponding to the full height of contra-angles micro heads
- **0.8 MFD***, smaller NiTi wire with a heat treatment
- off-centered cross section shaping files
- Higher flexibility and resistance to cyclic fatigue enabling **pre-curving** and memory shape

TRUNATOMY™ ADAPTS TO YOU, LEVERAGING YOUR EXPERTISE

Conservative Endodontic Cavity :

- Access is now possible from different angles while until now, structure needed to be sacrificed (traditional endodontic cavity).
- No need for straight line access.

TRUNATOMY™ ENHANCES PATIENT SAFETY

TruNatomy™ files provides enhanced safety as the risk of breakage is reduced due to its greater flexibility and resistance to cyclic fatigue¹.

TRUNATOMY™ SAVES YOU TIME

TruNatomy™ is an intuitive, straightforward and easy-to-learn endo solution.¹ Also, as it requires less shaping time, this allows more time for **irrigation**.

TruNatomy™ preparations seem narrow. Can I still obturate properly?

Yes, the **TruNatomy™ Conform Fit™ gutta-percha points** are designed to perfectly match the preparations made with **TruNatomy™** files and ensure an optimal obturation.

¹ Compared to ProTaper Next.

IRRIGATION & OBTURATION

FOR APPROPRIATE DISINFECTION

The **TruNatomy™ Irrigation Needle**¹ complements the treatment sequence.

- The back to back 2-sided vent design maintains a balanced irrigation solution volume for greater control throughout the canal.
- Its soft polypropylene allows the needle to curve and flex easily to follow the root canal anatomy.
- The plastic body makes the needle atraumatic for hard tissues.

The **EndoActivator®** agitates the irrigation solutions during endodontic treatment to enhance deep cleaning and disinfection. The **EndoActivator®** with the Small tip (15.02) is recommended for use with **TruNatomy™**.

FOR APPROPRIATE OBTURATION

Dedicated **TruNatomy™** obturation solutions include **Absorbent Points** and variable tapered **Conform Fit™ Gutta-Percha points**.

TruNatomy™ Absorbent points are:

- Packaged in individual sterile packs of 5 points
- Ready to use, part of a system-based solution for simple identification

TruNatomy™ Conform Fit™ Gutta-Percha are made to match the precise shapes created by the **TruNatomy™** instruments.

- Variable taper as the file
- Precise fit and accurate tug back
- Not made with natural rubber latex
- Part of a system-based solution

EQUIPMENT

Designed with practicality and ease of use in mind, **TruNatomy™** is compatible with the **Dentsply Sirona** wide range of equipment. This includes:

X-Smart IQ® Handpiece

A motor offering complete freedom of movement

- A slim, well-balanced and cordless handpiece
- Easy access and excellent visibility
- Quickly switch from reciprocating to continuous motion

Endo IQ® App

Control all your IQ devices through the integrated Endo IQ® app

- Enhances the functionality of your IQ devices
- Enables apical-reverse and shaping target features (only with app)
- Supports all iPad® sizes in landscape mode

Propex IQ® Apex Locator

Attractive and ergonomic design

- Future proof. Firmware can be upgraded via an app update.
- Guarantees reliable monitoring of file progression
- Lightweight, ultra portable, weighing only 80 grams

TruNatomy™ preparations seem very narrow. How can I irrigate?

The **TruNatomy™ Irrigation Needle's**¹ flexibility allows it to progress apically in curved canals below 12 mm.

¹ Product claims have not yet been validated and are subject to change.
